

KENMORE AIR™

Flying the Pacific Northwest Since 1946

1957 DHC-2 MK1 deHavilland Beaver Rebuild Project **\$265,000**

This is a rare chance to have Kenmore Air build a custom Beaver for a lucky customer from a genuine “barn find” airframe. This Beaver had been owned by a fishing lodge in central British Columbia from the mid-‘90’s until it was parked in a field in 2007.

It originally served with the U.S. Army in Germany until it was sold and imported into Canada in 1973. It was converted from military to civilian in 1978 at 4,049 hours total time. The last Journey log entry is at 5,404.4 hours when it was parked September 15, 2007. You will not find a Beaver with less than 1,400 hours of civilian time on the market today, let alone one with such a low total time.

This Beaver is a complete, nearly stock ex-military Beaver like we used to buy forty years ago. We simply do not see aircraft like this for sale anymore. Give us a call and we can talk about how we can configure the plane for you.
